Grundfos ALPHA1

Grundfos ALPHA1 is versatile and efficient circulator designed for heating and hot water recirculation systems. It features constant pressure control mode with three settings; Low, Intermediate, High. The intuitive one-button operation makes selection of the settings easy. The current operating mode is always visible on LED display.

Compact design

With the electronics integrated into the motor housing and standard 2-Bolt flange connection, installation into confined spaces and challenging applications are now possible. The ALPHA1 materials and design resist blockage from magnetite and iron oxide particles found in closed hydronic systems. The large LED display shows the current energy consumption in Watts and estimated flow in gallons per minute

Robust startup

Enables the ALPHA1 to continuously attempt to restart – indefinitely – in blocked rotor conditions

ALPHA1 is complete with an integrated check-valve, and nut captures for flanges. It comes in both cast iron and stainless steel models

Two options for power connections

For installation, you have the flexibility to use either our unique ALPHA Plug with line cord or the ALPHA1 with terminal box for conduit connections
